

AMENDMENTS TO THE SPECIFICATION

Please substitute the following title for the title presently in the application:

**A method for playback of stored or broadcast content based on predicted location
and/or attributes**

Please substitute the following abstract for the abstract presently in the application:

An apparatus includes a storage section that stores stored content, a content receiving section that receives content, a received content storage section that stores received content, and a playback section that plays back the stored content or the received content. A playback control section controls the playback section to switch between playing back the stored content and playing back the received content. A content list management section manages a content list that stores combinations of an address of content relating to a location within a predetermined area, and the location. A location detection section detects current location information and a received content determination section determines content that should be received from the content list based on the current location information. The content receiving section receives content relating to a current location determined by the received content determination section and the playback control section controls the playback section to switch between playing back the received content and playing back the stored content.

Please amend the specification of the present application by amending the paragraph at page 7, lines 11 through 13 to read as follows:

XML is a language whose specifications have been established by the World Wide Web Consortium. ~~Details can be found at web page <http://www.w3.org>.~~

Please amend the specification of the present application by amending the paragraph at page 26, lines 3 through 11 to read as follows:

In the example shown in FIG.12, ~~information 1~~ information 2 is assumed to be information of interest to the user. Therefore, the user outputs a save instruction to received content storage section 1002 via operation input section 1004 while information 2 is being played back or immediately after playback (ST1206). In this case, information 2 is determined to be information that is necessary for the user, and is saved in received content storage section 1002 (ST1207).
